

A pair of hands is shown from a top-down perspective, gently cupping a mound of dark, rich soil. In the center of the soil, a small, vibrant green seedling with two leaves is growing. The background is a vast expanse of the same dark soil, creating a sense of depth and focus on the hands and the young plant. The lighting is soft and natural, highlighting the texture of the soil and the delicate nature of the seedling.

Learning
TO GROW

INTRODUCING...
A PROGRAM FOR
YOUTH IN TROUBLE

THE PROGRAM FOCUSES ON *treating* THE
DISEASE, *modeling* ADULT BEHAVIOR AND
stimulating THE YOUTH TO LEARN AND SET A
PROCESS FOR *ongoing growth*.

As a child grows, interaction of Gene and his environment shapes the development of his mind.

Early experiences in childhood, at home, at school and in social settings become a vital part of his development.

Looking, thinking, changing, and adapting to what happened and anticipating what is to happen, learning to cope with negative emotions, building positive thoughts and generating drive and motivation, is how this program will stimulate the youth to grow and mature.

THE PROGRAM CONSIDERS THE *involvement* OF PARENTS
AND ACADEMIC MENTORS AS NECESSARY PART
OF THE *youths growth.*

Parental education through group process and co-operative efforts with the educational institution to sustain academic success would be component part of this program.
